

## BCD Hardener

### for Powder Filler

The BCD Hardener for Powder Filler is an addition to the Wood Mastic Powder Filler. The purpose is to strengthen the Powder Filler so that the repair becomes even more attachable and resistant to wear and tear. This is also the main reason why the hardener is a popular product especially within the parquet flooring industry where the floor boards are expected to last for several years even with hard tearing. The Hardener is also highly suitable for production with brushing methods when producing hardwood flooring.

You easily add the BCD Hardener to water and stir/shake well, before adding this mixture to your dry Powder. We recommend that the BCD Hardener replaces 10 % of the water, but it is better to make your own experiences that suit your specific segment and need.

#### Advantages:

- ✓ Adds strength to the Powder Filler.
- ✓ Faster drying.
- ✓ Improved hardening process.
- ✓ More resistant to wear and tear.
- ✓ Increases water resistancy.

#### Instruction:

1. Mix water and BCD Hardener in a bowl/ bottle and stir/shake well. The hardener must replace 10-20 % of the water.
2. Mix the liquid with the powder according to our normal recommendations: 3 parts powder to 1 part water/hardener mixture.
3. Ready.

#### MIXING TIP!

*Make the mixture of water and BCD Hardener in a bottle. In this way it is easy to estimate 10-20 % hardener, and it is easy to save the mixture and shake again before next use.*
